

Is Your Garage Door Hurricane Ready?

The Garage Door is the Largest Opening On Your Home.

Protect your home and property from hurricane-force winds with our Windloaded Garage Doors. Don't need a new garage door? No problem, we can retrofit most existing garage doors with a Windload Kit.

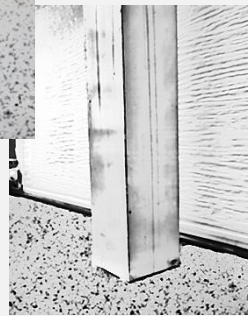

2-car doors requiring higher pressures use a Removable Hurricane Post system to protect your home against hurricane-force winds. Have a professional inspect your door to determine proper windload requirements.

Single-car doors and double-car garage doors with lower pressure requirements incorporate high-strength steel U-bar reinforcement, eliminating the need for a removable post. Have a professional inspect your door to determine proper windload requirements.

Windload Kit

Installation is easy. No Tools Required!

1. When the time comes to ready your door, simply place the post(s) into position.

2. Slide base tube pins into holes in concrete.

3. Extend telescoping end above door, sliding into bracket. Push bolt through post and pin in place.

4. Align bracket (s) on door struts (U-bars) and attach using bolt and pin.

Your door is ready to weather the storm.
